PRESS RELEASE

EUROTECH SECURES ITS FOURTH CONSECUTIVE CHAMPION TITLE IN THE IOT PLATFORMS IN TECHCONSULT'S PROFESSIONAL USER RATING

Almost 4,900 application experts rated providers in PUR ES 2026 survey: Eurotech is one of six Champions among the 20 best-rated IoT platform providers

Amaro (UD), Italy, November 25, 2026 – Eurotech, a leader in embedded systems and edge AI enablement solutions, has been named Champion in the "IoT Platforms" category of techconsult Professional User Rating: Engineering Solutions (PUR ES 2026). It is the fourth consecutive year that users have placed Eurotech in the Champion segment of the PUR diamond: the top category of the ranking, reserved for providers that achieve excellent ratings both a company and for their solution.

The PUR is based entirely on user experience and feedback. For the 2026 edition, techconsult surveyed 4,889 application experts, who evaluated the vendors and IoT platforms across more than 60 criteria divided into two main dimensions: Company Rating and Technology/Solution Rating. The Company Rating covers aspects such as innovation capabilities, service and support, product portfolio, partner network and training, while the Solution Rating assesses general base properties, IoT-specific functions, user-friendliness and product loyalty. Of the larger group of IoT platform providers, only 20 met the criteria to be included in the final evaluation. Of these, six achieved Champion status, with Eurotech among them, alongside some of the world's largest technology companies.

Users gave Eurotech outstanding marks in both dimensions. At company level, they particularly valued its innovation, its service and support – praising the expertise and responsiveness of the support team – and its flexible pricing and business models. At solution level, they highlighted the platform's device management capabilities, its straightforward setup and immediate scalability, and the seamless integration of external tools and existing IT infrastructure. Users also reported tangible benefits, from optimized processes and workflows to lower operating, servicing and maintenance costs, and an excellent product loyalty rating shows that they would choose Eurotech again and recommend it to others.

"Being named Champion by our users for the fourth year in a row is more than an award for us: it shows that customers trust us with infrastructure that is critical to their business," said Robert Andres, Chief Marketing Officer at Eurotech. "That trust is closely linked to managing the risks associated with a decision for a specific offering, including digital sovereignty. Our customers want to stay in control of their data, their code and, increasingly, their AI, without

being locked into a single vendor. By developing the core of our software in the context of well governed open source in Europe and combining it with certified cybersecurity, secure-by-design hardware and long-term support, we give them exactly that freedom. This PUR ES 2026 recognition encourages us to keep moving in that direction."

"Eurotech received consistently excellent ratings both as a provider and for its solution – a clear indication of high customer satisfaction and the platform's tangible value," said Verena Bunk, Senior Analyst at techconsult. "For decision-makers seeking a future-ready IoT platform, Eurotech is a highly recommended option. Its strong combination of technological ambition, innovation, and customer focus makes the company a valuable partner for digital transformation initiatives."

Eurotech's Edge AIoT offering combines edge hardware, from IoT gateways to Edge AI servers, with the Everyware Suite for edge software and device management. Eurotech delivered the first programmable IoT gateway and the first Edge AI server certified to the IEC 62443-4-2 cybersecurity standard and develops the core of its software as open source within the Eclipse Foundation's IoT Working Group, of which it is a founding member.

About techconsult GmbH

techconsult GmbH, a company of the Heise Group, is a leading research and analyst firm specializing in digital technologies and services. With over 30 years of experience and 35,000 interviews annually with decision-makers, techconsult provides reliable data-driven insights for technology investment and strategy decisions.
