

Eurotech: Parvus Receives \$4.8M in Follow-on Orders from General Dynamics C4S to Support U.S. Army's Top Modernization Priority

Parvus Ethernet switches support Warfighter Information Network-Tactical (WIN-T) program

Amaro (Italy) – June 19th, 2013 – Parvus Corporation, a Eurotech subsidiary, announced today \$4.8M USD in follow-on orders from General Dynamics C4S, the prime contractor for the U.S. Army's Warfighter Information Network-Tactical (WIN-T) program, the U.S. Army's highest modernization priority. Parvus has been supplying General Dynamics with ruggedized Ethernet switches for the WIN-T tactical network for the past four years. In total, more than 2000 units have already been deployed or are scheduled for delivery. Deliveries for the latest follow-on orders are expected to happen over the next 3-5 months.

WIN-T Increment 2 leverages proven commercial and government technology, including a ruggedized Cisco-based Ethernet switch subsystem from Parvus, to enable soldiers and commanders with vital communications capabilities on the move and enhance soldier safety and effectiveness.

“WIN-T utilizes Parvus' rugged COTS networking technology to make on-the-move networks possible and free soldiers from a fixed command post,” said Parvus President Dusty Kramer. “Parvus Ethernet switches are ruggedized to ensure reliability in extreme conditions in the field, and we are pleased our products are assisting the U.S. Army as they update their mobile infrastructure to provide vital situational awareness to soldiers during missions.”

WIN-T Increment 2 began fielding in October 2012 and allows soldiers to utilize applications for maneuver, fires and intelligence from inside vehicles, enabling commanders to make decisions on-the-move and ensuring effective and unpredictable offensive and defensive operations.

About Parvus

Parvus Corporation is a leading supplier of rugged COTS computing and IP networking subsystems for Size, Weight, and Power (SWaP) constrained military, aerospace, and homeland defense applications. **Parvus' tactical mission processors, network routers, Ethernet switches and embedded board-level** products provide highly reliable command, control, computing and communication (C4) capabilities for situational awareness and mobile data processing in airborne, ground vehicle, and naval installations.

About Eurotech

Eurotech (ETH.MI) is a global company that integrates hardware, software, services and expertise to deliver embedded computing platforms and sub-systems to leading OEMs, system integrators and enterprise customers for successful and efficient deployment of their products and services. Drawing on concepts of minimalist computing, Eurotech lowers power draw, minimizes physical size and reduces coding complexity to bring sensors, embedded platforms, sub-systems, ready-to-use devices and high performance computers to market, specializing in defense, transportation, industrial and medical segments. By combining domain expertise in wireless connectivity as well as communications protocols, Eurotech architects platforms that simplify data capture, processing and transfer over unified communications networks. Our customers rely on us to simplify their access to state-of-art embedded technologies so they can focus on their core competencies. Learn more about Eurotech at www.eurotech.com.
