

THE ESSENCE of EUROTECH

IMAGINE. BUILD. SUCCEED.

Reducing complexity
for our customers
by creating smart,
connected computers

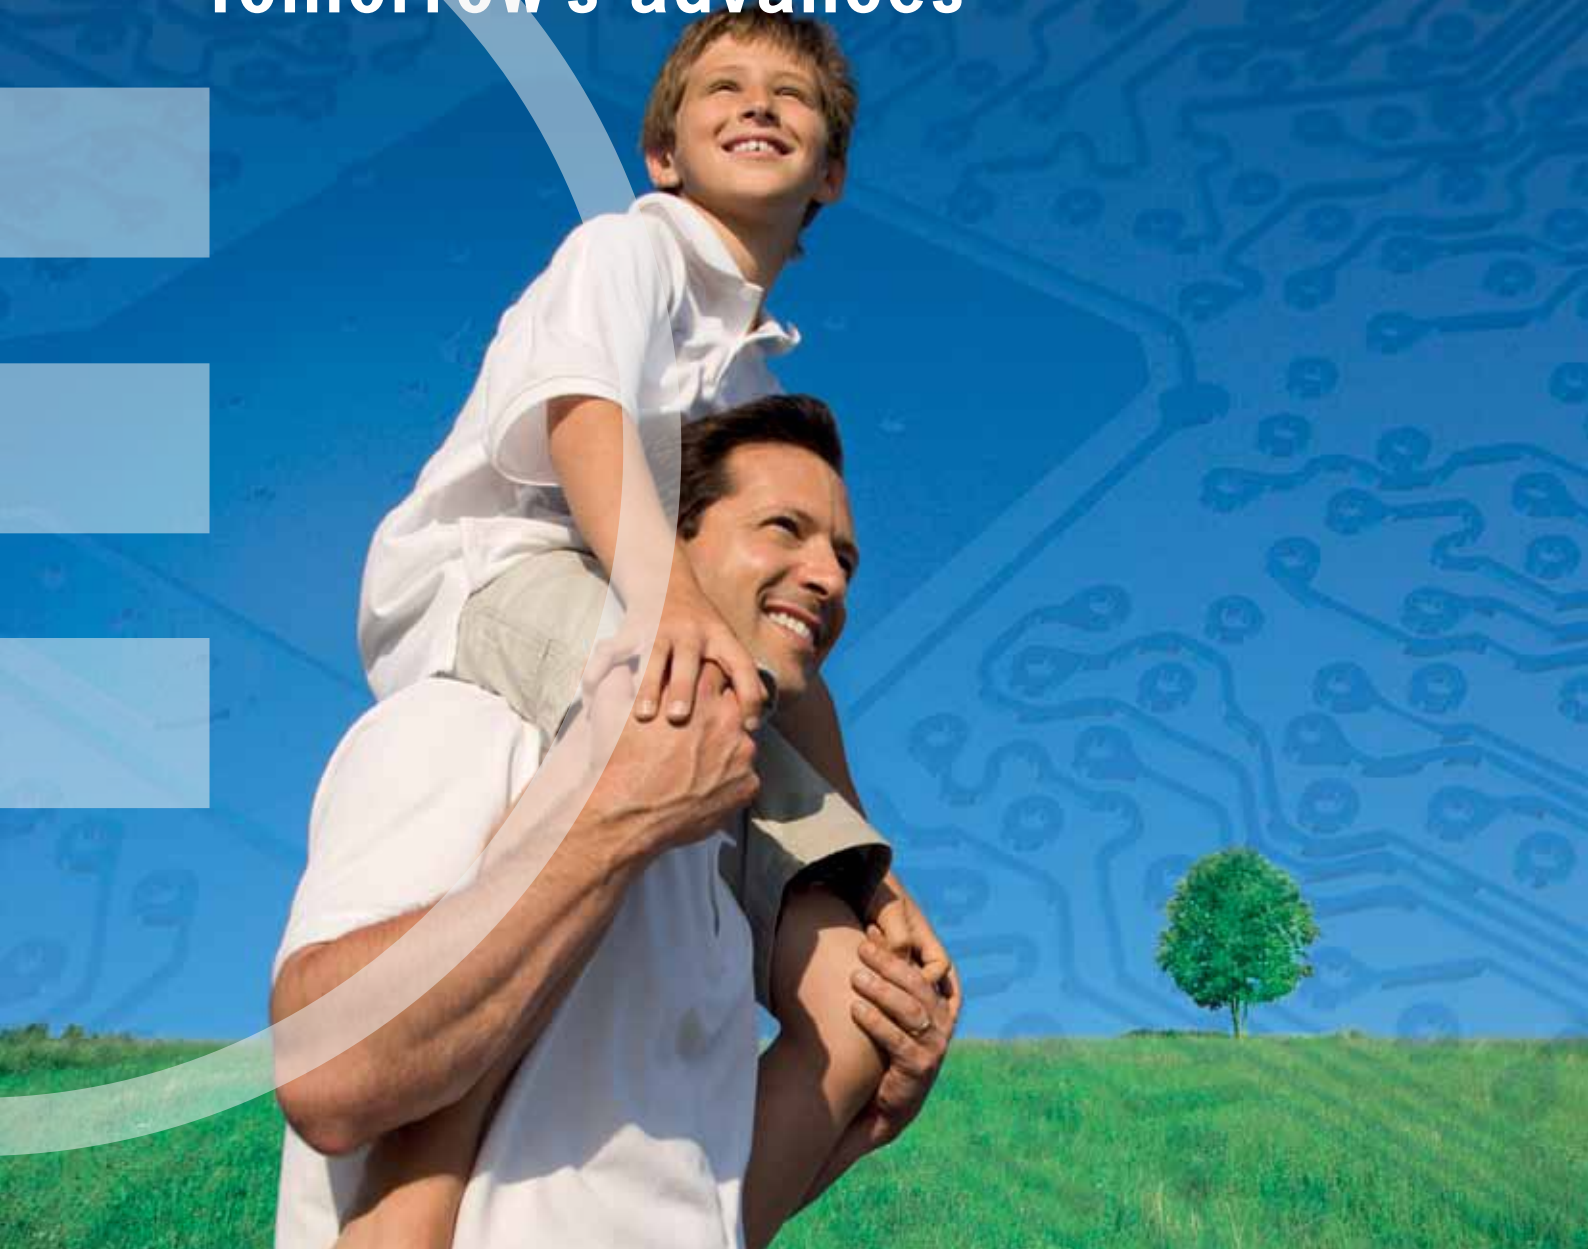

THE EUROTECH GROUP

The success of digital technology is shaping the **way computers merge with the real world**. We began by addressing the challenge of real-time control of machines. From day one we knew that the right answer delivered too late becomes the wrong answer, so we learned **how to ensure accuracy and reliability together** with timely delivery of information. While we continue to enhance our real-time control offering, we more and more address the challenge of **creating end-to-end solutions** to seamlessly interconnect distributed smart objects and **move valuable data between machines**, not just within machines. With a tiny, connected computer attached, **any object can generate a data stream and potentially become an asset monitored via the web**: from a vending machine to a money bundle, from an agricultural vehicle to a rail crossing. But to create the so-called “Internet of Things,” you must manage the interface between real world and digital world, between sensors and web, between devices and Cloud. At Eurotech, we know both how to process significant data in real world applications and how to move it into the Cloud. Today, **all our hardware platforms and devices can easily plug into the Cloud infrastructure**, allowing our partners and customers **to build flexible IT installations** that can **support new value-add services and asset monitoring applications**. As we continue foresighting the future, **in our work we encapsulate a natural attention to the social dimension**: we imagine how to use digital technology to make **systems smarter, infrastructures greener** and **key services available for a wider group of people**; in other words, **to create a better world**.

Roberto Siagri
President & CEO

Today's smart decisions Set the stage for Tomorrow's advances

We live in an increasing complex world. Whenever we can find ways to simplify, our lives become more calm, more serene, more joyful. In the same way, growing complexity in technology can make companies long for the past when it was easier to define and create a product that met a clear market need. Now market needs are multi-faceted and deeply complicated. And solutions to those needs must be comprehensive and complete. Eurotech's primary goal is **to take complexity away for our customers, and simplify the creation of market solutions.** Our customers know their business, and they know it extremely well. Whether designing a powerful, cloud-ready device or delivering information to help end users through their day, **Eurotech customers solve the toughest real-world problems.** And we make that process easier for them, by providing the foundation for those solutions.

At Eurotech, the brightest engineering minds **redefine the limits of technology through research and collaboration.** Combined with world-class operations, administration and customer-facing teams, Eurotech **makes sophisticated technology available as a beneficial, integral part of everyday life.** **Efficiency,** central to our development philosophy, defines our contribution to our customers' operations and **reduces environmental impact.** Applying this principle results in **small size, low power draw,** and **low heat dissipation** across our product portfolio, so we can put **the highest performing capabilities in the smallest packages.**

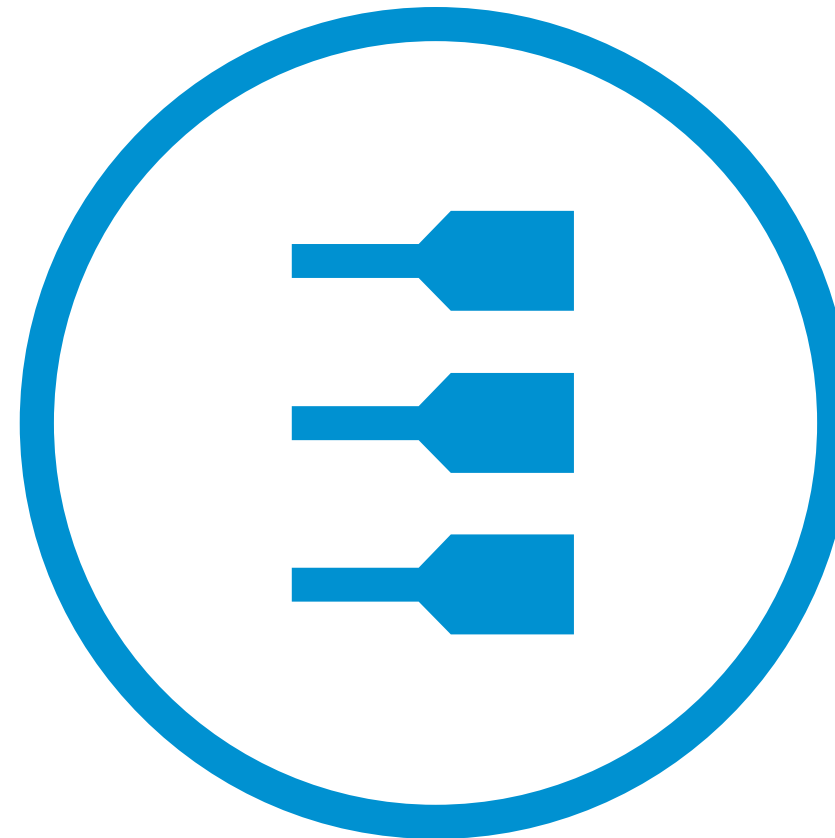

Added Value

What makes a product really different these days? What you can do with it, not what it's made of. How you can use it, not where you find it. Software takes great ideas and makes them possible, on whatever platform, service or connection you choose. Through Eurotech software, our team makes your team more successful, more quickly.

Actionable Information

Stacks of paper, online sources, endless reports... you can drown in details and data. With Eurotech data management, bits and pieces of diverse data from many disparate sources become real information, the kind that lets you make intelligent choices, take decisive actions and be most profitable in your business operations.

Optimal Computing

Eurotech designs for low power, small size, rugged platforms, and elegant coding in all aspects of computing and communications. You benefit from this experience, fine-tuned over decades, when you choose our solutions as the starting point to create your sustainable and efficient devices, applications and services.

Customer Success

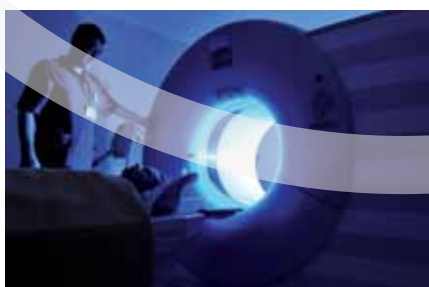

Eurotech's commitment to enduring customer success is driven by our sensitivity to and understanding of your requirements, your environment, and your processes. We design flexibility into our practices and operating policies as we focus always on how to help you bring your solutions to life.

Flexibility. Scalability. Durability. Sustainability. Compatibility. Availability. Reliability. Efficiency.

MOBILE RUGGED COMPUTERS. AUTOMATIC PEOPLE/PASSENGER COUNTERS. DEVICES FOR LOCATION BASED SERVICES. SCALABLE EDGE NODES. FLEET MANAGEMENT DEVICES. M2M INFRASTRUCTURE SOLUTIONS. EMBEDDED BOARDS. RUGGED ROUTERS AND SWITCHES. RAILWAY CERTIFIED DEVICES. WEARABLE COMPUTERS. DEVICES & SUBSYSTEMS FOR DEFENSE.

Committed to a Vision: Digital Technology for a Better World

PORTABLE COMMUNICATION DEVICES. SECURITY DEVICES. VIDEO SURVEILLANCE SYSTEMS. REAL TIME PROCESS CONTROL SYSTEMS. SMART GRID & SMART METERING SOLUTIONS. AEROSPACE CERTIFIED DEVICES. HIGH PERFORMANCE LOW POWER BOARDS & MODULES. MEDICAL GATEWAYS. RUGGED HPC. SUPERCOMPUTERS. DEVICE CLOUD SOLUTIONS.
