

Legambiente FVG and A.L.P.I. chose Eurotech's environment-monitoring systems for air analysis

Within Project Genki, the ReliaSens environment-monitoring system will be used for real-time analysis of air quality

Amaro (Italy) – May 22th, 2017 – Eurotech, a leading provider of embedded systems, Machine-to-Machine (M2M) platforms and Internet of Things (IoT) solutions, announces a technology partnership with LEGAMBIENTE FVG and A.L.P.I. (Associazione Allergie e Pneumopatie Infantili) within Project Genki.

Project Genki aims to monitor the air quality of some sensitive locations, in order to promote knowledge- and awareness paths among citizens about environment in urban contexts.

Eurotech, as technology partner, provided two ReliaSens monitoring systems for free in the initial phase of the project.

Note: although the amount ordered up to now is not considerable for Eurotech, the partnership itself has a certain importance for the company, as it demonstrates a relationship which could possibly lead to further orders of ReliaSens products. In that case, Eurotech reaffirms its commitment on timely informing the market.

About Eurotech

Eurotech (ETH:IM) is a global company that designs, creates and delivers full Internet of Things solutions, including services, software and hardware to leading systems integrators and enterprises large and small. With Eurotech's solutions in place, clients have access to the latest open source and standardized software stacks, flexible and rugged multi-service gateways and sophisticated sensors to bring actionable data from the field into business operations. Working with world-class ecosystem partners, Eurotech delivers on the promise of the Internet of Things either from end to end, or with best in class building blocks, including device and data management, connectivity and communication platform, intelligent edge devices and smart objects following business models that fit today's business world.
