Crisp Research Recognizes Eurotech as Top Vendor in IoT Edge and IoT Cloud Technologies

The report classifies Eurotech as a market leader in the Edge environment with an extensive device and software portfolio

AMARO (Italy), November 15th, 2018 – Eurotech, a long-time leading provider of industrial embedded hardware such as gateways, servers, control systems and boards, as well as high-performance computing systems and software solutions, one of the pioneers and leader in Internet of Things (IoT) enablement, has been recognized by Crisp Research as a top vendor in IoT Edge Technologies and IoT Cloud Technologies.

The report highlights Eurotech's very complete, modular but integrated device and software portfolio: the company's expertise in application optimized hardware and software at the edge makes it attractive to users within as diverse verticals as Industry 4.0, smart energy or transportation. Being built on a scalable infrastructure, Eurotech Everyware Cloud provides an integrated solution for data, device, security and embedded application lifecycle management in the field, regardless whether leveraged on premise or in the cloud.

Crisp Research provides comparisons of many aspects of IIoT solutions, to help companies to find the right technology vendors and service providers for their IoT applications. As a result, the report offers great benefits to the organizations and individuals that are challenged by the inherit complexities and risks associated with the implementation of IIoT solutions.

"We take pride in the very positive positioning of Eurotech in the report, at the edge and in the cloud" commented Robert Andres, Chief Strategy Officer at Eurotech. "Crisp Research's methodology and segmentation does go beyond looking at an individual aspect of an IIoT building block by evaluating a vendor's capability at the edge from a hardware and software perspective and also at the datacenter side. This does reveal strengths and weaknesses of IoT offerings in amazing ways. Crisp Research's assessment emphasizes once again the quality of our offering for the IIoT."
