

The Italian region of Friuli-Venezia Giulia already meeting regulation requirements with Eurotech's automatic passenger counters (APC) on buses

Eurotech's passenger counters already installed on urban and intercity bus lines allow accurate real-time passenger monitoring, remotely and on site

Amaro (Italy), May 12th, 2020 – By installing its [automatic passenger counters](#) on vehicles of transport, Eurotech offers a solution to meet the requirements of recent regulations and safety rules in the public transport sector.

Among a large number of use cases, the installation on urban and intercity bus lines in the Friuli-Venezia Giulia region stands out. The project was started a couple of years ago and involved major local public transport operators, such as SAF, Trieste Trasporti, ATAP and ATP: all companies which have benefited from better fleet management operations and improved customer experience.

Starting in 2018, a decree required the installation of passenger counters on all public buses, in order to monitor the number of passengers on board in real time.

“Thanks to our passenger counting solutions, local public transport companies can afford cutting-edge on-board systems for real-time passenger monitoring to improve fleet management and to adapt the number of circulating vehicles according to the needs, like the project run in Friuli-Venezia Giulia” commented Roberto Siagri, Eurotech CEO. “Moreover, because of the current situation we are facing due to Coronavirus, it is even more important to track the number of people moving around on public transport means and avoid crowded situations”.

Passenger counters allow local public transport companies to know the exact number of people on board in real time and to take necessary action when needed to guarantee social distancing.

Both the driver or the monitoring staff can promptly and effectively act to limit the number of people on board or to increase the number of vehicles in operation to better serve the public.

Eurotech's passenger counters ensure extreme accuracy and precision and can be integrated with [Internet of Things \(IoT\)](#) technologies to provide remote monitoring and connectivity among devices.

About Eurotech

Eurotech (ETH:IM) is a multinational company that designs, develops and supplies Edge Computers and Internet of Things (IoT) solutions – complete with services, software and hardware – to system integrators and enterprises. By adopting Eurotech solutions, customers have access to IoT building blocks and software platforms, to Edge Gateway to enable asset monitoring and to High Performance Edge Computers (HPEC) conceived also for Artificial Intelligence (AI) applications. To offer increasingly complete solutions, Eurotech has activated partnerships with leading companies in their field of action, thus creating a global ecosystem that allows it to create "best in class" solutions for the Industrial Internet of Things.
